ABOUT ME

Frontend Engineer specializing in building high-performance, responsive user interfaces with React and Next.js. Dedicated to pixel-perfect styling and smooth user experiences, with comfortable hands-on experience integrating backend services and handling full-stack data flows.

TECHNICAL SKILLS

- TypeScript · JavaScript (ES6+) · React.js (19) · Next.js (16)
- HTML5 · CSS3 · Tailwind CSS · Styled Components · Responsive Web Design
- Framer Motion · Zod · Vitest
- PrismaORM · PostgreSQL · Node.js · NestJS
- Git · GitHub · Neovim · Vercel
- SSG · ISR · SSR · Optimistic UI

WORK EXPERIENCE

React/JavaScript Front-end Developer | Argonaut Research Technologies

Full Time | Since August 2025 | Current

Building a modern, high-performance web application for social research, i spent the initial months working as a Vanilla JavaScript Developer where i was building the application alongside internal libraries and documentation, before transitioning the platform to React.js. I have since continued working as a React.js developer, tackling complex tasks like building a custom word-like text-editor.

PROJECTS

The Wild Oasis admin side

Complete fullstack hotel staff app for tracking customers. Initially built with React, JavaScript, Styled Components with no responsive design, and Supabase. Later improved with NextJS, server actions, Prisma, and PostgreSQL. Supabase now handles images only. Secured with Zod, using SSG/ISR for performance. Optimistic UI applied throughout, clearly visible on the cabins page.

The Wild Oasis customer side

Complete full-stack app with NextJS, initially built with JavaScript, later upgraded to TypeScript. It stays in sync with the admin side of the application, utilizing both dynamic and static pages.
